

UPS WORLDSHIP / FEDEX

SEAMLESS INTEGRATION WITH THE TRIBUTE SOFTWARE SYSTEM

Tribute® offers seamless integration with UPS Worldship Online and FedEx Ship Manager enabling Tribute customers to experience substantial time-savings and improved customer service. Automatic tracking of this data significantly decreases errors during the invoicing process and allows more efficient and accurate capture of inbound freight expenses. Yet another way Tribute continues to stay in step with technology to offer our customers increased efficiency, productivity and profitability.

Shipment Tracking

- Automatically import package shipment data (including tracking number, service type, package weight, amount, etc.) into your Tribute database for use in Tribute-based shipment inquiries and streamlined invoicing. This allows for quick and easy retrieval and more efficient tracking of inbound freight to recoup those expenses.
- Easily launch right from your Tribute order to the UPS or FedEx website to track your shipment directly online via the internet. You'll have your shipment's status (where the package is in route, when delivered to the end customer & who signed for it) right at your fingertips.
- The tracking information can be automatically added to the invoice header comments to show up on the customer's invoice print so they can track the packages as well.

Shipment Email Notification

The Tribute UPS/FedEx interface can be set up to automatically send notification emails to the customer via the UPS Worldship "Quantum View Notify" or "FedEx ShipAlert" features anytime a package is shipped.

Real Time Connectivity

Real time connectivity between the UPS Worldship and FedEx databases and the Tribute® database with information regarding customer Bill-To, Ship-To, Vendors and Sales Order data allows up-to-date information inquiries.

Automatic Posting

Improve customer service levels with automatic posting of freight, handling charges, tracking numbers and shipment information to Tribute's invoicing module. Freight amounts include any additional handling added by UPS, which is imported back to Tribute to be included on the invoice for completely accurate freight costs.

Pricing & Customer Information Updates

No more waiting for updates! With the real time integration between Tribute® and UPS Worldship and FedEx, price updates are automated and the need to manually key in is eliminated. Also, any customer information changes maintained in Tribute (address, default service types, billing options, UPS & FedEx account numbers) are automatically updated into your UPS Worldship / FedEx Ship Manager database.

Reduce Errors

Since information no longer needs to be re-keyed into either Tribute® or UPS Worldship/FedEx Ship Manager, the potential for error is drastically reduced and accuracy levels are improved. This saves you both time and money in the process.

Increase Warehouse Efficiency

- Seamless processing for most shipping scenarios such as shipping multiple invoices in the same box, and with UPS, consolidating multiple packages shipped to the same location into one shipment.
- UPS/FedEx integration allows your warehouse staff to do more, ship more, & make you more money.

Interested in decreasing operating expenses by streamlining the invoicing process through online integration with UPS Worldship and FedEx Ship Manager? Call your Tribute Sales Representative at 1-800-TRIBUTE for more information.

Product Requirements:

- Windows 95 or above and a Networked PC
- An Available QICWARE® ODBC Client License
- A QICWARE® SQL Server License.
- UPS Worldship ♦ FedEx Ship Manager Software

Note: UPS/FedEx Integration is included in the Tribute base software package but the above products are required to make it work.
