

Securely Process Payments and Cut Costs with Level-3 Processing

Tribute Software and WEX 3Delta have partnered to give you the ability to manage, tokenize and store payment transactions in real time through your Tribute or TrulinX credit card module. These services offer a powerful and flexible suite of capabilities including card data tokenization and Level-3 line item detail, designed to meet your varied business and payment processing requirements. No longer do you need one system to handle internet credit card transactions and other systems to manage phone or email orders.

BENEFITS

MANAGE PAYMENT ACCEPTANCE COSTS

Card processing is not all the same. WEX 3Delta's specialized capability reduces bank fees and qualifies transactions for the best available processing rates.

STREAMLINE TREASURY AND ACCOUNTS RECEIVABLE

Improve cash flow and cut your DSO (days sales outstanding,) reduce paperwork and labor-intensive processes associated with managing business receivables, tracking and reconciliation.

CORPORATE PURCHASE CARD LEVEL-3 CAPABILITIES

Meet customer data requests and significantly reduce costs associated with purchase cards (Pcards) by processing with more comprehensive, Level-3 line item detail with each transaction.

WORKS WITH MANY PROCESSING PLATFORMS

- American Express
- Elavon
- Global Payments
- Fiserv (formerly First Data)
- Paymentech Salem
- TSYS
- FIS WorldPay Core (formerly Vantiv)

FREE TRANSACTION DATA AND BUSINESS REPORTS

Powerful online reporting lets you define and save custom reports. Managing transaction data and business reports has never been easier.

SECURE CREDIT CARD DATA

Minimize Payment Card Industry (PCI) data security compliance requirements and lower the risk and consequences of a possible security breach by safely storing confidential customer payment data in our secure data centers with our CardVault® tokenization process.

WHAT IS LEVEL-3 DATA?

Level-3 processing provides more detailed information about a transaction to the buying organization. For merchants, providing Level-3 data means significantly reduced interchange fees. Level-3 processing is required for big-ticket transactions prevalent in the B2B and B2G arenas.

WEX 3DELTA PLATFORMS

Our payment systems are scalable, easy to implement and PCI compliant, with the ability to expand as your business grows. You can process transactions directly from your Tribute or TrulinX software. No additional hardware or software is required and, with Level-3 transaction processing included as a standard feature, B2B customers qualify for the lowest interchange rates available.

- **EC-Zone®:** When used in conjunction with Tribute and TrulinX software, this gives you a complete credit card processing solution with powerful tools for reviewing transactions and running reports online. In addition, EC-Zone is a virtual terminal that could be used for processing any transactions that fall outside of your Tribute or TrulinX system.
- **Card Vault®:** This lets you safely and securely process transactions via a token or alias while removing the risk of storing sensitive card data on internal systems. A token is a replacement value for the actual card data. Off-site card data storage significantly reduces PCI compliance costs and promotes streamlined certification when compared with holding data on-site.

HOW IT WORKS

encrypted

encrypted

- Transaction information and payment card data is entered into your Tribute/TrulinX system. The Tribute/TrulinX system sends encrypted transaction information to WEX 3Delta.
- WEX 3Delta sends secure transaction and payment card information to the card network for processing. The card network provides WEX 3Delta with the transaction result.
- WEX 3Delta sends encrypted transaction information back to the Tribute/TrulinX system.

Special Tribute/TrulinX Pricing
