Tribute TribNet Breakout Sessions 2023

JOINT SESSIONS (for both TrulinX and Tribute users)

Managing Lead Times Post-Pandemic

We are experiencing supply chain issues as we never have before, and we're here to help you use the TrulinX and Tribute products to manage the ever-changing environment. We'll show you how to use inventory management settings to keep your lead times accurate in the midst of the current environment, and protect yourself when unexpected delays happen. We'll also give you tools to identify items that have inaccurate lead times so you can fix them.

Moving from Tribute to TrulinX: What You Need To Know

Are you contemplating a transition off of Tribute software to our Windows product, TrulinX? If you are, then it probably feels a little daunting. We're here to help you understand how the transition will happen, help you prepare for a smooth transition, and help you get a plan together to start the process. Come to this session with your questions!

Breakout Sessions for Tribute Users

New Features

TribNet wouldn't be TribNet without sharing the newest features and capabilities that have been added over the last year. If you didn't read your monthly Tune Up Notes… don't worry, we'll re-cap what you missed!

Tribute Master Class

This yearly class brings hot tips and little tidbits about making your Tribute routines a little bit easier. It's created to target multiple areas of our ERP system so that no matter which of your users attend TribNet they'll have some new tricks to take back to the masses. Favorite sayings from past Master Classes…. "How did I NOT know this?!?" and… "Oh this is going to make my life soooo much easier!". Come join the fun in learning things you didn't know Tribute had to offer!

Importing Data: Making Your Life Easier Using Tribute Importing Functionality

This session will help you save hours of data entry by showing you the basics of importing into Tribute, plus it will overview all the programs where importing is available, including but not limited to: order entry, purchasing, discounts, inventory management, cash receipts and price updates. Once you have users that nail down the template setup… the sky is the limit.

Tribute Lessons Learned

This session will be broken down into 5 or 6 different topic areas. We will gauge the topics based on user registrations and use that to target the discussions. This will be an interactive session where attendees will be able to discuss the topics with other attendees, as well as, ask questions of the session facilitators.

Program Review & Tribute Development

This session will detail the importance of our Program Review Committee. It will outline how the process works… from submitting a Project Sheet to how you can join the committee. It will also allow for discussion of current Project Sheets and any questions or details of what was voted on during the 2023 committee meeting. This session is for both interested users… as well as those users currently or previously on the committee.

ZFIMs, ZFIMs, ZFIMs – There are so many ZFIMs!
What is a ZFIM and how can it benefit you? This class will discuss several of our most frequented company settings (ZFIM Options) as well as show off some hidden gems. It will also help you search and find ZFIMs on your own. Attend this session if you want to walk away a ZFIM expert!

Acquisitions – Preparation & Implementation
We've seen a sweep of acquisitions for our customers, and this class will lay out some of our recommended preparation steps and detail out some of the importing options you have to make your acquisition a smooth implementation.

Tribute – Choose Your Own Adventure! Session
New to TribNet this year, we will have a session that is completely driven by registrant input. Once you register… we will reach out with information on how you can vote on the topics for this session.

Back to Basics – New User Class
We would be lying if we said this class is only for new users. Although targeted for helping new users to jump into the Tribute environment, it's also a great class for veteran users to review key elements to set up customized Tribute screens, navigate through Tribute programs and not get lost trying to find data through inquiries. We've taught this one before… and we'll teach this one again… it's that good!

Quest Inquiries
This session will show you how to design and run your own custom Tribute inquiries. We'll discuss the basics and show you the "standard" QUEST inquiries that are already a part of your Tribute system. We'll show you how to create basic queries using QSTCM and we'll cover multiple examples, such as searching sales orders based on the Mark Number, finding customers flagged for emailed invoices, etc. The possibilities are endless! QUEST is an amazing tool for those who need to search their data quickly, but aren't comfortable writing Report Generators. Attend this class and learn something new!

ROUNDTABLES

Job Roles (for both Tribute and TrulinX Users)
This roundtable session will allow users who perform similar tasks in similar roles to network and discuss common issues and share tools to do their job better.

Speed Distribu-dating Session (for both Tribute and TrulinX users)
In this valuable networking and roundtable session, we will have tables for different topics that affect the distribution and engineered products industry. Choose your table or tables and move around the room at your own speed to maximize the benefits of this session.
